ProChek✓

Pegasus Sort Gate

- ✓ Completely flexible operation
- ✓ Install on either left or right hand gates
- ✓ PC Interfaced
- ✓ Batch entry or individual entry
- ✓ Interfaced with various herd management programs

Sorting Gate System

Sort and segregate cows with flags set - A.I., vet attention, mastitis, calving date or any other convenient group - completely automatically.

You just set the flag and ProChek✓ does the rest.

Rapid, accurate tag reading captures even the faster cows.

Uses 'battery-free' electronic ear tags: fit to either ear.

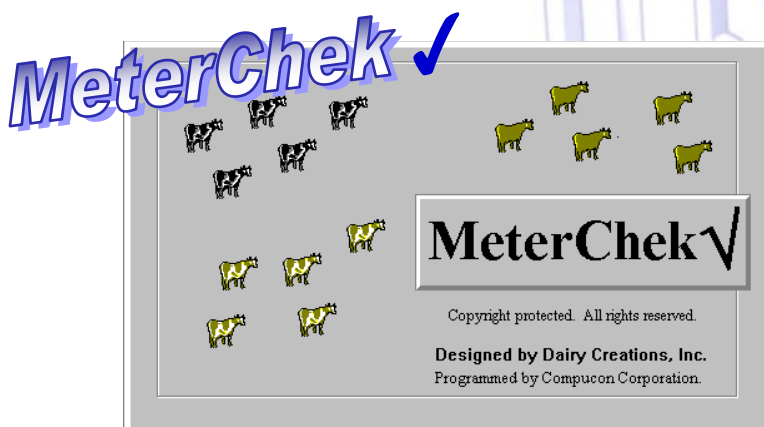

The ProChek✓ Cut Gate Antenna is an 'active' unit which unlike a normal single loop or simple side panel, creates a complex pattern of fields which are continuously changing. This means that tags can be read at all angles within the framework of the antenna.

Same low cost ear tag transponders identify cows in parlor for automatic milk recording.

Modular construction will fit just about any exit alley.

Heavy duty, hot dipped galvanized steel construction.
